Spare Knife

MacDon

WHAT IT DOES

This kit is used to replace a damaged knife while in the field with a full length factory replacement. The spare knife is installed at the factory into the backtube of the header before shipping. Never be without a spare knife in the field.

FEATURES/BENEFITS

- » The spare knife is stored out of the way inside the backtube of D2 and FD2 Series headers

Notes:

Only available when ordered and shipped with header.

WHAT IT IS/DOES

MacDon's EasyMove™ Transport System makes it easier than ever to move your FD2 Series FlexDraper® from field to field.

This Performance Option is entirely self-contained on the header and allows towing behind your combine at speeds up to 32 km/h (20 mph)*.

Headers equipped with this option also have the advantage of using the spring-loaded stabilizer wheels to help steady the header when cutting off the ground in bumpy field conditions creating an even stubble height.

FEATURES/BENEFITS

- » Transports D2 and FD2 Series headers safely from field to field
- » Prevents the header from bouncing or rocking side to side
- » Allows for an even cutting height when cutting off the ground
- » Locks into a rigid position completely off the ground when they are not in use

Notes:

**Always follow local traffic laws and regulations.*

IDEAL CROP CONDITIONS

Crop conditions where cutting off the ground is necessary.

IDEAL FIELD CONDITIONS

Bumpy field condition.

WHAT IT IS/DOES

Take FlexDraper® Performance Over the Top! The ContourMax Performance Option is a hydraulic system that uses strategically placed wheels under the FlexDraper. This design takes full advantage of the FlexDraper's Flex/Float system mirroring the contours of the field while cutting up to 18 inches from the ground surface. Using ContourMax sets you up for next year's seeding with a consistent even stubble height.

FEATURES/BENEFITS

- » Takes full advantage of the FlexDraper's Flex/Float system mirroring the contours of the field while cutting up to 18 inches from the ground surface
- » Stubble heights between 25.4 mm (1 inch) and 457 mm (18 inches) from the ground surface*
- » Adjustable in-cab and on-the-go
- » Height sensing package for John Deere X9 combines. Adds the ability to have preset heights with your AHHC programmed.

Full Length Upper Cross Auger

MacDon

WHAT IT DOES

The upper cross auger attaches in front of the backtube and improves crop feeding into the center of the header in heavy crop conditions. It is ideal for high-volume harvesting of forages, peas, canola, mustard and other tall, bushy, hard to feed crops. It prevents crop from balling up on the drapers and flowing over the backtube.

FEATURES/BENEFITS

- » Moves heavy, bushy, high-volume crops to the center of the header for smooth feeding
- » Variable pitch flighting at the center of the auger aggressively drives crop into the combine
- » Features a shut-off valve to disengage the drive when the auger is not required
- » Upper Cross Auger speed is relative to side draper speed
- » True full width auger
- » Three piece auger flexes at wing pivots

IDEAL CROP CONDITIONS

High volume and bushy crop conditions.

IDEAL FIELD CONDITIONS

Any field condition.

Weight:

156 kg (344 lbs)

Set-Up Time:

2 hours

Instruction #:

215293 (Hydraulics), 215042 (Completion)

WHAT IT DOES

Vertical knives significantly reduce seed shatter loss from dividing interferences of the standard crop dividers and allow for consistent dividing in all conditions. The vertical knife attaches to a MacDon designed mount that fits on the header ends.

FEATURES/BENEFITS

- » Quick attach and removal, hydraulically driven allows for adjustable speed
- » Motor stays mounted low on the header
- » No hydraulic hoses to connect. Hoses remain on the header.

IDEAL CROP CONDITIONS

Canola and oilseed rape, or any other bushy, tangled crop.

Hydraulic Reservoir Fill Extension

MacDon®

WHAT IT DOES

The Hydraulic Reservoir Fill extension kit allows D2 and FD2 Series headers to operate on steep hillsides while maintaining oil supply to the suction side of the pump.

FEATURES/BENEFITS

» Prevents the pump cavitating at extreme angles

Notes:

Recommended if operating in conditions with hills exceeding 5°, recommend ordering Side-Hill Stabilizer with the purchase of a Hydraulic Reservoir Fill Extension.

Rock Retarder Kit

MacDon®

WHAT IT DOES

The rock retarder kit is ideal for situations where cutting low is necessary in rocky field conditions. In these rocky conditions, this kit will help prevent rock ingestion by preventing most stones up to the size of a baseball from getting onto the drapers.

FEATURES/BENEFITS

- » Allows ground level cutting in rocky field conditions
- » Prevents most smaller rocks from getting onto the drapers and into the combine
- » Compatible with both Pointed and PlugFree Guards

Notes:

This kit may impede crop flow in short crops.

IDEAL CROP CONDITIONS

Most crop conditions.

IDEAL FIELD CONDITIONS

Rocky field conditions.

Crop Lifter Kit and Storage Rack

WHAT IT DOES

The crop lifters attach to the cutterbar and are designed to lift downed and lodged crops. For use when the crop is flat to the ground, and some extra lifting action is required, or a taller stubble height is needed. The crop lifter rack comes as a set of two and mounts to the backtube of the header allowing for convenient storage of the crop lifters when they are not in use.

FEATURES/BENEFITS

- » Aids the header in lifting downed and lodged crops
- » Attaches and detaches quickly and conveniently stores on-board with the crop lifter rack

Notes:

Crop Lifter Storage Rack may interfere with other options depending on how the header is configured. For example some configurations that might not work; EasyMove Slow Speed Transport combine extension hitch storage location, crop divider storage bracket, stabilizer/gauge wheel.

Not recommended with the FD2 PLUS

IDEAL CROP CONDITIONS

Lodged cereal crops.

WHAT IT DOES

The Side Hill Stabilizer kit will stabilize the header while on side hills in order to have better ground following capabilities and will function in the same manner on a hill side as it does on level ground. In certain conditions without the side hill stabilizer, the ground following capabilities of the header may be reduced, resulting in crop being missed.

FEATURES/BENEFITS

» Better ground following in hilly terrain.

Notes:

**Recommended if operating in conditions with hills exceeding 5°, recommend ordering Hydraulic Reservoir Fill Extension with the purchase of a Side-Hill Stabilizer. Not needed for D2.*

WHAT IT DOES

Tine Tube / Reel Conversion kits convert a standard 5 bat (tine tube) reel into a 6 or 9 bat reel.

The additional tine tubes and reel tines allow for a slower reel speed with less load on each individual tine tube; gently lifting delicate or lodged crop.

FEATURES/BENEFITS

» Improves feeding performance in severely lodged or delicate crops.

IDEAL CROP CONDITIONS

Stringy or delicate crops.

IDEAL FIELD CONDITIONS

Any field condition.

FM200 Feeding Performance Configurations

MacDon®

SPECIFICS

Instruction #:

214002 (Auger Flighting), 214170 (Stripper Bar)

WHAT IT DOES

The Feed Auger Flighting Extension kit allows better feeding of crop in green/wet straw conditions and is recommended for rice applications.

Stripper bars can be used to improve feeding in certain crops such as rice. Each stripper bar kit contains one left and one right stripper bar, and the hardware required to attach them to a MacDon FM200 Float Module.

FEATURES/BENEFITS

- » Moves green/wet crop to the center of the feed auger for smoother feeding in these conditions
- » Improves feeding in rice and other specialty crops

IDEAL CROP CONDITIONS

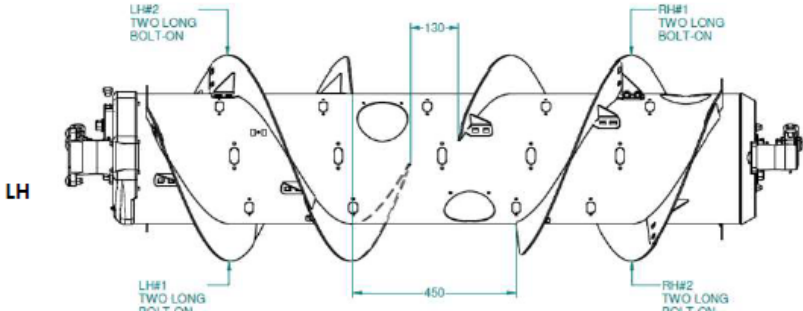

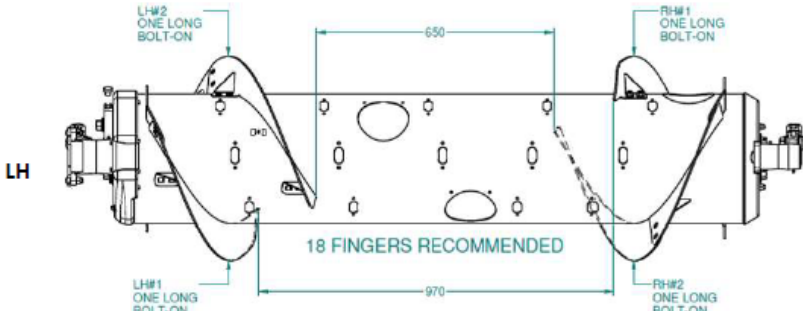

Green/wet straw conditions and rice.

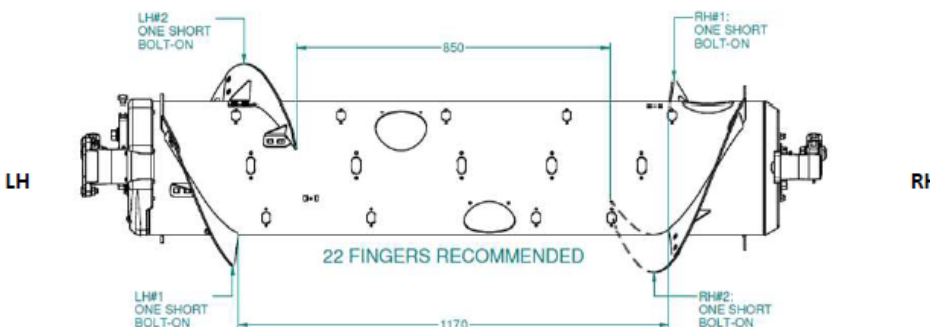

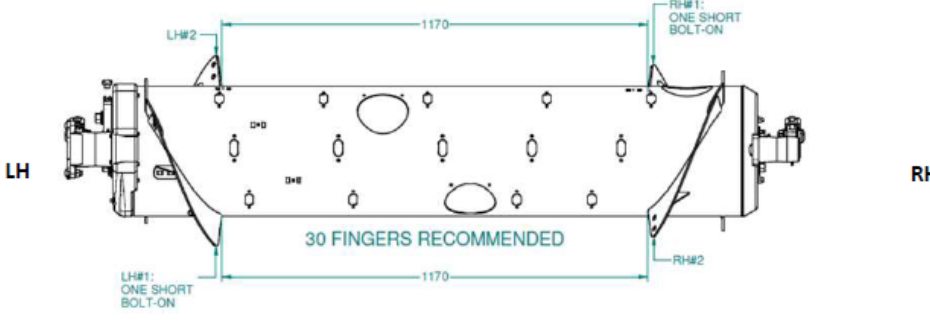

IDEAL FIELD CONDITIONS

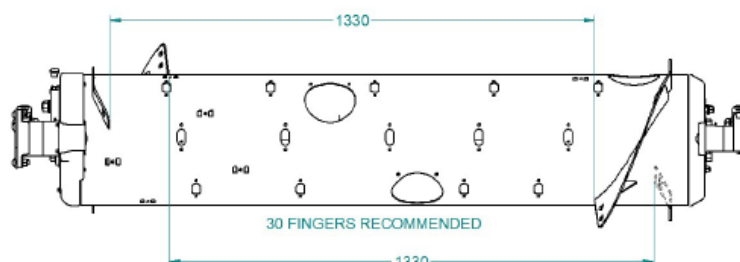

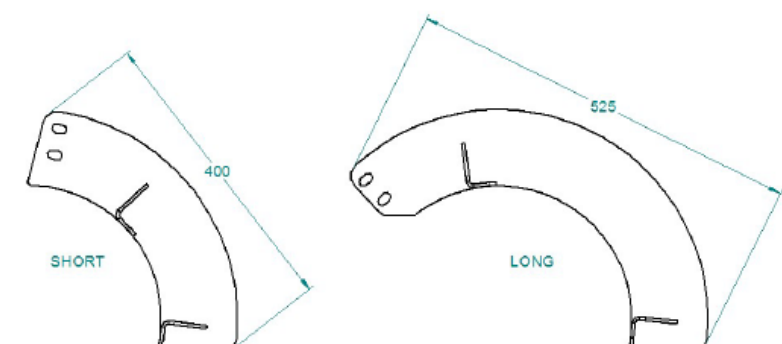

Wet field condition.
